
pair density $P(x, y)$ of the $N = 4$ determinant
x
y
conditional density and exchange hole, $N = 4$
$n(y)$
$n_{\mathrm{cond}}(y \mid x = 0.0)$
$n_x(x = 0.0, y)$
$n_{\mathrm{cond}}(y \mid x = 1.5)$
$n_x(x = 1.5, y)$
y
$N = 2$: exchange hole versus correlation hole
$n(y)$, Hartree-Fock
$n(y)$, exact
$n_{\mathrm{cond}}(y \mid 0)$, Hartree-Fock
$n_{\mathrm{cond}}(y \mid 0)$, exact
y
